BENEFIT OF  
INGREDIENTS WITH  
CLINICAL STUDIES

## DHA (Docosahexaenoic Acid)

- A type of omega-3 essential fatty acids that cannot be synthesized by body
- DHA significantly contributes to the brain development and mental health
- DHA can enhance memory and learning abilities
- Help protect against age-related cognitive decline

## Antioxidants - D-Alpha Tocopherols (Vitamin E)

- Act as natural antioxidant and nutritional source for natural vitamin E
- Vitamin E is a fat-soluble vitamin which allows it to cross the blood-brain barrier
- Serves as an antioxidant in body, scavenging potentially harmful free radicals that can damage cells
- Support brain health conditions and including dementia and Alzheimer's

## Antioxidants - Vitamin C

- Vitamin C is a powerful antioxidant and facilitates neurotransmission
  - Vitamin C plays a significant role in the functioning of the brain by regulating neurotransmitter synthesis and release
- Protects brain cells and nervous system tissue from damage caused by free radicals
  - Reduce brain inflammation

vitamin

# Choline

A choline deficiency causes:

- ☐ Fatigue
- ☐ Memory loss
- ☐ Cognitive decline
- ☐ Learning disabilities
- ☐ Muscle aches
- ☐ Nerve damage
- ☐ Mood disorders and changes

- Important in the nervous system and for the development of normal brain functioning
- Choline is associated with a lower risk of ischemic stroke
- Maintaining the brain's ability to continue to learn is critical to staving off dementia and memory loss
- Choline is needed to produce acetylcholine, an important neurotransmitter for memory, mood, muscle control, and other brain functions

## Vitamin B6 and B12

- Help to prevent long-term damage to brain tissues
- Ensure the brain to stay energized and focused
- Also plays a part in regulating the amount of homocysteine, high levels of which are linked to cognitive decline
- Protects brain cells, and reduces the risk of degenerative conditions such as Parkinson's, dementia, and Alzheimer's
- It is required for the creation of red blood cells that transport oxygen to the various regions of brain to ensure optimal nervous system function, and cell development and growth

# Collagen Peptide

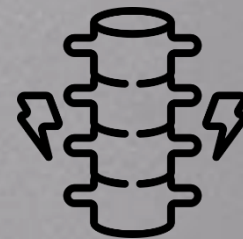

- Support healthy knees, by reducing pain and stiffness
- Provides support for the growth and repair of cartilage tissue, as well as relieve joint inflammation and pain
- Collagen as a key active ingredient to support joint comfort, flexibility and mobility which beneficial for someone experience joint discomfort and pain, sports enthusiast, or suffer from arthritis

# Vitamin D

- Vitamin D is necessary for strong bones and muscle
- Ensures the correct renewal and mineralization of bone
- It keeps the bones strong by helping the body absorb calcium and phosphorus, key minerals for bone health
- It also helps with other disorders that cause weak bones, like rickets.

VITAMIN  
D

# Calcium

- Calcium is a mineral that the body needs for healthy body, bones and teeth
- Vitamin D helps the body absorb calcium and regulates calcium in the blood
- If not enough calcium, body will take it from bones to ensure normal cell function, which can lead to weakened bones or osteoporosis.

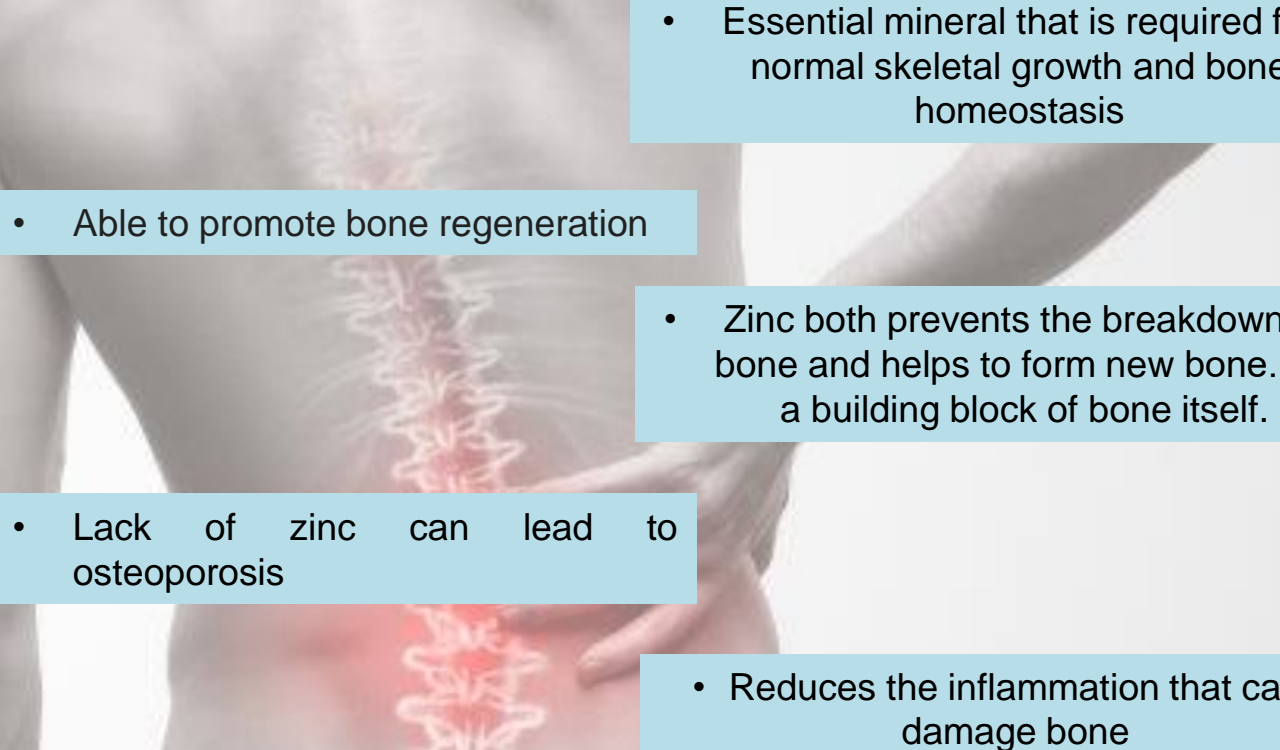

# Magnesium

- Magnesium (Mg) as an essential trace element in bone metabolism
- Role in inflammation and cartilage rebuilding in helping patients with osteoarthritis
- Magnesium stimulates hormone calcitonin that helps preserve bone structure by drawing calcium from the blood and soft tissues back into the bones
- Magnesium is also necessary to convert vitamin D into its active form so that it can stimulate calcium absorption

# Zinc

- 
- Essential mineral that is required for normal skeletal growth and bone homeostasis
  - Able to promote bone regeneration
  - Zinc both prevents the breakdown of bone and helps to form new bone. It's a building block of bone itself.
  - Lack of zinc can lead to osteoporosis
  - Reduces the inflammation that can damage bone
